Correspondence of the Gazette.

Lerrin was to-day arrested and put under \$1000 londs to swalt the action of the grand jury for an attempt on the life of J. S. Longly near Voca, in this county, Longly's statement is that he was building a fence near his home sate yesterday evening when some one fired on him from ambush, the builet inking effect near the back of the head and knocking him to his hands and succes. He arose and ran, and as he was tunning away another shot was fired at him, the latter missing him. He says he looked back as he run away and recognized the would-be assassin as being McLerrin. He was about fifteen feet away when he fired the first shot. Longly is a brother of the noted Bill

A LITTLE UNEASY.

Politicians Speculating as to the Outcome of the Third Party Move-

Biaine Praised for His Course in the Burnndla Affuir-Ac un! Cause of Attorney Wilson's Removal-

Third Party Fright, Special to the Gazette.

WASHINGTON, Dec. 8 .- The proposition of the Farmers' Alliance to organize a third party is giving some uneasiness to both Republicans and Democrats here, as such a movement would draw votes fro a each party and greatly change the political situation. Republicans hold that the Alliance is an attachment to the Democratic party, and that the Democrats would lose the most votes to the third party, although they coufess to losses themselves in the West.

The Democratic assumption is that the Republican Alliance men would vote for the alliance national ticket, while most of the Democrats in the Alliance would vote with their old party.

BLAINE'S COURSE APPROVED. Blaine's attitude in the Barundia correspondence appears to meet with general approval in congress. Both Democrats and Republicans speak in praise

The Republicans will have great difficulty in correcting the two serious blunder sin the tariff bill-the omission of the rebate on tobacco and the violation of the Hawalian treaty-without reopening the entire tariff question, and will give rise to endless discussion and numerous amendments. in other directions, especially tin plates. A large tobacco contingent is now here from all parts of the country. ''I don't see how we can help reopening the whole subject, " said Mr. Mills of Texas. "As much as I want to help the tobacco men, we would have trouble in the committee states. on ways and means in respect to the tobacco rebute sentiment and the Hawadan treaty, but the trouble will come after the bill comes up before the house. If one amendment is proposed, it is possible to offer another amendment without sending them to has faith in himself and faith and pride the committee, and there are a in his territory, and is destined to win number of am itious Democrats who success of the proudest character, other amendments as soon as an oppor-tunity is presented.'' wish to make records who cannot be re-

Representative McMillon, who is next to Mr. Mills, the most active Democrat in the ways and means committee, takes the same view, but says there are two way to get around it. The committee on rules can adopt a new rule to fit the case, or they might pass the amendment on suspense of one day if they could get two-thirds of the house to vote for it. "

WILSON'S REMOVAL. The removal of Joseph II. Wilson as said to be king in our country, but it district attorney for the Eastern district takes the almighty dollar to move the of Texas was due to the slip-shod manner of conducting his office. It is said that he signed in blank a large number of subparts which were the need of more money and easier access used instrumentarily by the law- to it in handling our cotton. It is true yers simply for the purpose we have had the means to handle of collecting witness fees without regard the already large quantity of cotto the public's interest. A general dis-regard of his obligations, it is said, was characteristic of Wilson, and his removal was promptly made when the facts become known here.

Senators Reagan and Coke have suggested the name of Mr. McComb. whose administration under Cleveland gave general satisfaction, but the assistant district attorney has been appointed, it is said, temporarily. Of course it is not to be expected that McComb would die the ribbon cane eyrup which seeks a be named for the place by a Republican market through our merchants. The

JUSTICE TO OKLAHOMA.

A Misrepresentation of the Facts-The Crops and the Government Appropriation-

ORLAHOMA CITY, O T., Dec. 8, 1990.

A few days ago there appeared in THE GAZETTE a special from Austin which whose sales nanually will reach \$35,000.

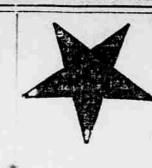

We have one of the linest millinery "Professor R. T. Hill, who went about three

"Professor R. T. Hill, who went about three weeks ago to On a nona to investigate the actional water sup it there has returned. He found the consistent of the people there to be a hard one. Outside of the towns they are all settlers, and very poor as a rule. No crops of any sort with the exception of a little cotton in one or two places were raised this year. The doubt destroyed everything. Many of the people in the towns as well as the country are sterped in the and clothed in rays. Destination and rays constitute the lot of many a nouseholder. The government appropriation made at the last session of congress for the benefit of the mede in that direction has been exhaus ed, and the government described in the states of the leaf states, will in session, to make an appeal to congress for additional aid." for additional aid. It is useless to say that THE GARETTE whose sales are very large.

has been imposed upon. Drummers from houses in Fort Worth are constantly - sales reaches a way up into the thouhere seeking trade. The desire to injure sands. Oklahoma has not always been absent from the newspapers of Texas, although it is to be hoped that a sense of fairness and a desire to receive Oklahoma patronare would keep them in line. The pro- to the city, fessor states that the government approprintion has been exhausted. The appropriation was \$47,000. Of this \$24,000 has been expended for supplies, which are not exhausted as yet, and in this city and open a national bank. Our county (Oklahoma) none are being merchants and business men will extend issued. In regard to the "failure of all you a hearty welcome, and, if necessary, crops but a little cotton" he is grossly in will invest dollar for dollar with you. error. The wheat crop was good, This township (Oklahoma) and a surplus of 1500 bushels, despite the fact that the breadth of wheat sown was small. The corn crop was practically a failure, but hay and every manner of vine and root crops were a grand success. As to cotton, the purchasers in this city have paid out over \$100,000 this year, and two cotton gins are kept running here day and night. There is also one in each of the towns of Norman, Edmond and

Frisco, which are also cotton markets. This city is a fair sample of the enterprise of the country, which it would do well for even Fort Worth to notice, is not worth built on foreign capital. No loan company has ever placed a dollar of cheap capital in the territory. No building and loan company has operated here, yet there have been built since the first day of July, 750 frontage feet of brick, equaling thirty buildings of the usual twenty-five feet front, and one-third of them are three stories nigh. In the eight blocks which constitute the business portion of the city, the fol-lowing lines of business are represented: Three daily and four weekly newspapers; retail groceries, twenty-four; wholesale croceries, three; barber shops, seven; staurants, sixteen; hotels, eleven; noission houses three:

Mining, Quarying and Manufacturing Genter OF TEXAS.

OFFICE OF THE FINANCIAL SECURITIES COMPANY, Dallas, Tex., Nov. 30, 1890.

There are not often found among the stocks offered to investors by us any that partake, in the slightest degree, of the nature of a speculation: but, by a personal examination of the properties and the prospects of the Liano Improvement and Furnace Company of Liano, Texas, we have become convinced that its stocks with yield the profits of an uncommonly good secondard, while company is 10,000 shares (\$1,000,00) of Treasury Stock, and we recomm in it without reserve to our friends and to the public generally, inviting careful attention to the following pain statement of what we believe to be facts: tailor establishments, three; dry goods

LOCATION.

Liano, the county seat of Liano County, is situated on the Liano River, about sixty miles northwest of sustin, the state capital. At present without rai road facilities, it is within easy reach of eight distinct lines, as follows: The Austin and Northwestern, at Marbie Falis (twenty-live miles); the Gulf, Colorado and Santa Fe. at Lampsaas (forty-three miles); the San Autonio and Aranas Pass, at Comport (sixty miles); the St. Louis, Arkansas and Trass, at Gatesville (about eighty miles); the Internationa and Great Northern, and the Houston and Trass, at Gatesville (about eighty miles); the Missouri, Kansas and Trass, at Waro (10 miles); the Fari Worth and Rio Grane, at Commanche (about soo miles). The topography is not difficult, and the prospective tomage is great as a consequence of which facts severa (four all-as) of these rainrond companies contemplate early expensions to Plano. In the meantime, the Wace, Lampsaas and Liano rainway company, organized by riends of the Liano enterprise, is actually eight of the company will run its trains into Liano early next summer, thus giving contaction with outside markets by way of the Gulf, Colorado and rants P: railway, to which will be added, when the Wace end of the line is completed, the Missouri, Kansas and Trass, the Houston and Texas Central, and the St. Louis, Arkansas and Texas. The building of even one of these lines of railway will make of Liano an important trading center for the large faming and grazing district west of it. Competent persons estimate the cotion business of the town at 25,000 bales (\$90,900) for the next year, while the grain, wool and Hyestock shipments should show even larger values. light plant, and above all, a surrounding while the grain, wool and ity, stock shipments should show even larger values.

CLIMATE, SOIL, ETC.

The climate is mild, the average temperature being, approximately, 6) degrees Fabrenheit, which is about the same as that of Southern Italy. An altitude of som: 120 refer gives a dry, bracing atmosphere, with cool nights, and there are but few days in either summer or winter when out-of-toor labor cannot be comfortably carried on. The topography is that of a country not mountainous, but somewhat broken; and walle it is not exactly a farming district, it abounds in fertile valleys, capable of provisioning a large industrial population. Bold springs and swift streams of clear water are numerous, and, in short. Notice has omitted nothing to make of this region a self-sufficient, healthful, picturesque and in every way delightful place of human abode.

FUEL.

The only fuel at present known to exist in the immediate vicinity of Llano is timber, in varieties suitable for charcoal burning. Coal of inferior quality is found in several localities in Texas, and the recently discovered mines in Erath county, about 125 miles from Llano, we expected to produce an ample supply of good coking coal. However this may be, coke of excellent quality can be had from the state of Coahulla, Mexico (about 30 miles), from the Indian Territory (about 40 miles) and from Colorado (about 50 miles). From the last mentioned district coke can be laid down in Llano at not more than 50 a ton as soon as a railroad is councied to the town, whence it will be seen that the fuel question is not a serious one under present conditions, and is likely, before long, to cease to be a question at all. This meems especially clear when we reflect that one of the mos successful steel companies in America is said to ship its raw ore 50 miles or more, and its coke an count distance, its location as regardian market to: its raw ore 50 miles or more, and If You Are a Capitalist Seeking a Good, MINEOLA, TEX., Dec. 5 .- Cotton is its coke an equal distance, its location as regard a market for its product being so favorable as to offset the long haul for its raw materials.

WATER FOWER.

of our country, and our city is now feeling In size and character the Liano river at Liano reminds one much of the Merrimac river at Con-In size and character the Lisno river at Lisno reminds one much of the Merrimac river at Concord and Manchester, N. H., which river is said to be used more for manufacturing purposes than any other stream in the word. The Liano has a constant flow, which at times is very heave. Its tall across the company's town site property, a distance of over four miles, averages about twelve and a half feet per mile. A dam can be cheaply and well built from granite immediately at hand, forming a large reservoir from which a canal can be led across the company's property by an inexpensive grade, and into the river again, affording abundant power for waterworks, electric limit and electric power plants, cotton miles, woolen miles, some working plants, pinning with other establishmen s too numerous to be mentioned here. The early development of the cherished plans of the company.

STONES. we have had the means to handle ton marketed here, but a few times we have suffered some inconveniences by having to await the arrival of funds, and this, and various other in-

The country about Liano is wonderfully rich. Labe principal economic stones. Granite is found in proinsion and in great variety and the include and texture. There are said to be over twenty abades of granite from as many the defensite, several of which the writer has sampled at the quarries. On the company the many form of the deposite, several of which the writer has sampled at the quarries. On the company to make property, not more than two or three blocks from the hotel, is a large deposit of bugs grante so fine in texture that a class is needed to distinguish the partice so fine and the departer and considered the said to equal the Quincy granite of Massachusetts. The red granite of which the new Texas state house is built is from the Liano-Burnet granite fields. On the town sit e property is a large deposit of riohom marble. Five or six miles south is one of a very beautiful what marble, near which, again, is one of clouded marble, white and bine. Other colors are reported. These were sampled at the quarres by the writer. In the town is its one of a very beautiful wh te marble, near which, again, is one of clouded marble, white and bine. Other colors are reported. These were sampled at the quarres by the writer. In the town of Llamo is an outcrop, ing of blue limestone, which appears to the writer. In the town of Llamo is an outcrop ing of blue limestone, which appears to the writer, from memory, to be like the blue limestone of Southern Indiana, from which the new Indiana state house was built, and which has been shipped to New England—a veritable "carrying of coals to Newcaste." Other limestones are found in limities; quantities. An eighteen-mile range of limestone hils not far from town contains enough of the material for the building and fluxing purposes of a dozen Pitt-burchs. Adjoining the from mountain mine is a very large deposit of striped sandstone, which has been successfully used in some local buildings.

IRON.

Ent great as are the quarrying prospects of Liano, she has another resource of still more promise. Both cast and west of the fown are extensive veins of from one of excilient quality, and so stut tel as to be cheeply mined. Edito E imonds of the M mofacturers' Re-ord says, in a long arile e written for his paper, as the result of a personal investigation: "even the limited amount of prospecting and development that has been don-indicates clearly that there is a supply of high-grade Bessemer ore in this region that is practically exhaustless. From the indications above ground and below there appears to be no reason why this district should not prove, upon development, to be in every respect tally equal to the most productive of the Lake Superior ranges, both as regards quality and quantity. There is every reason for belief that the Liano region could readily yield an annual output of from 2,000, 000 to 4,00,000 tons within three years after the commencement of vigorous development operations and the estab ishment of adequate shapping facilities; and even this should not interfere with an unlimited supply for the requirements of any local furnaces that may be established.

In another part of the article above quoted, Mr. Edmonds computes that Bessemer ore from Liano could be indid down in Paliadelphia at from St. 20 to 35 per ton, and the manager of the Liano Improvement and Furnace Company estimates the cost of good Bessemer pig at a furnace in Liano to be 5 o per ton. Messrs E. V. d'Invillier; and A. S. McCreath of Phila relphia conclude a report upon the iron properties of the Liano Improvement and Furnace Company as follows: "From what ma already been said in the body of this report, It would seem almost superfluons to call attent ion to the fine quality of the ore thus far developed on your property. The analyses show an over rich in metallic iron, and renerally low in phosphorus. While it is true that all the samples analyzed do not show ore couling tric by within the Bessemer I with the samples showed an o

Metal ic iron. 64.690 "In order that a comparison may be made with some of the well known Lake Superior ores, which are shipped in large quantities for Bessemer purposes, the following table has been prepared, comprising samples of the average of the shipments during the year 183): comprising samples of the average of the summants during the yet Name o Ore.

ORCANIZATION OF THE COMPANY.

such other developments of the property as may be agreed upon by party of the first past and party of the second part."

The Liano Improvement and Furnace Company is a corporation under the Texas laws, having 0,000 shares of \$110 each (\$1,000,000) capital stock. The capital stock, as we understand it, was saued to the individual vendors of the company's various properties in payment therefor, 10,00 hares (\$1,000,000) of the stock being attenwards donated back by these individuals to the company of the held as treasury stock and sold for the purpose of procuring funds to develop the properties, will be seen therefore, that the stock is full paid and non-assessable. The treasury stock it xacily like all other stock of the cumpany and its owners share equally is proportion to their heldings with the current of other stock, in the management and profits of the business.

TERMS OF SALE.

We will receive subscriptions for five shares and upwards of the company's treasure stock at the rate of \$50 per share; \$10 pea share to ac ompany the subscription (which will be prompty returned if, for a sy reason, the subscription cannot be accepted), and \$5 per share to be paid monthly thereafter for eight monthly making a total of \$50. The right is reserved, however, to increase the prize of unsoid stack without notice at any time after \$100. 1, 1831.

A stock register will be kept by us, and transfers of the stock will be permitted at any time. Our receipts will be issued for the various installments as they are paid to us, which receipts will be transferable by indurement. Any one preferring to do so can pay up the entire amount of his subscription at once and receive a stock or ificate there or; otherwise stock certificates will, o course, not issue until all the installments have been paid.

All communications of whatever kind relating to the treasury stock of the company shoul be held with us. Liberal commissions will be paid to agents for the sale of this stock in every faces town and throughout the United States. Samples of Liano minerals may be seen at our office in the Central National Bank building.

CONCLUSION.

The experience of companies and individuals engaged in the development of mineral properties and the upbuilding of iron towns in the southeastern states, under circumstances so newhal he those prevailing at Liano, is such as to lead us to believe that the profits accruing to the early subscribers for this stock will be exceeding y large. We are informed that one iron town companish although any paid within the past four years over \$1,000 of dividends upon each \$100 of sock of sock, and that the mirket price of its stock is now \$1000, which would show to the holder who paid \$100 per share a profit in dividends and increased values of over \$2,00 for each \$100 of stock owned, or all average of over 500 per cent per year. Just what the profits of the Liano Improvement and Frances Company will be we, of course, cannot venture to predict, but we are thoroughly convincitiate the conditions surrounding the enterprise are as favorable (if not more favorable) as the education similar enterprise that has been undertaken in recent years, and we shall not be in the slighted degree astonished if the results achieved equal those of the most successful of the Alabora and Tennessee companies.

We solicit for this stock not merely the large subscriptions of the capitaist, but the small ones of the professional man, the clerk and the mechanic, and fully believe that whether large small the results will be most graffying to the subscriber.

We have tried to write a statement of facts, entirely plain and devold of sensationalism, but it is almost impossible to repress one's enthusiasm in contemplating the wooder'in possibilities of such a district. Calling to mind a Mancheater, built upon its water power; a Qulney, upon its granite; a Butland, upon its marble, and a Birmincham, upon its from, who can forced when my be the future of Llano, with its water power, its granite, its mirble, its iron and its many other The experience of companies and individuals engaged in the development of mineral properties
